A Message from the President of the Jury

Dear Contestants,

We’re getting close to Hard&Soft 2012; I hope you’re all looking forward to it.

Here is some advance information that you might find useful:

1. You will be expected to base your hardware design around an mbed microcontroller from NXP Semiconductors, for more information see: http://mbed.org/handbook/mbed-Microcontrollers
2. Somewhere in your system or user interface design wireless/mobile features will be expected, so bring a smartphone
3. To standardise and minimise the amount of “paperwork” involved in reporting to the Jury we will use a Moodle environment, if you’ve not used it you might want to gain familiarity in advance

Looking forward to seeing you all in Suceava for Hard&Soft 2012.

Prof. Timothy Hall,
President of the Jury
Hard&Soft 2012
